

The Advantages of Powder Coated Aluminum Railings in Our Environment

Century Aluminum Products manufactures and distributes Powder Coated "Component Style" aluminum deck railing. Designed for the Do-It-Yourself and Pro-Contractor markets Century Railings are as easy to assemble as "Lego". The railings are available in both glass and picket style.

Powder coating is a VOC free finish (Volatile Organic Compound) and uses no heavy metals. Special venting or filters are not required, plus over sprayed or unused powders can be recovered and recycled.

As the demand for maintenance free and environmentally friendly products grows, powder coated aluminum railings have become the alternative choice when designing sundecks and patios. The elimination of potentially harmful cleansers and stains is another reason why powder coating has become so popular.

The use of aluminum in the Century railings eliminates the requirement to use wood, therefore helps in maintaining our forests.

Our manufacturing plant is a state of the art high tech facility that uses environmentally friendly procedures throughout the design and manufacturing process.
