

Gate Installation Guide

- 1) Determine over-all width of opening and allow 2 inches for latch and 2 inches for hinges (gate will fit a maximum opening of 48 inches).
- 2) Remove post from end of gate and cut top and bottom rail to desired length of opening.
- 3) Re-attach post and secure with screws.
- 4) Insert all pickets and spacers as shown. Aluminum spacers snap on to bottom rail. Cut last spacers to desired length and secure in place (use rubber mallet to move pickets and snap in spacers).
- 5) Measure down from top of gate post 6 inches and up from bottom of post 6 inches and attach hinges.
- 6) Align top of gate post with top of adjacent railing post and secure hinges as shown on post or wall.
- 7) Attach and secure latch at desired height.

IT IS NOT ADVISED TO USE GLASS IN GATE.
